MESCO TRUST — CMS ADMIN GUIDE

12. Page Publishing (Draft / Publish)

How to add, publish, un-publish and delete a page

> **Audit reference:** Item 21 — *CMS / Documentation (Question): "How to publish a page (needs documentation/clarification)."*

The two Status options

Status	What it means
`Draft`	The page is saved but is **not visible** on the website.
`Published`	The page goes **live** the moment you save it — there is no separate "Publish" button.

1. Add a new page

1. Go to **Pages** → **+ New Page**
2. Enter the **Title** (for example, "About Us")
3. Enter the **Slug** — this becomes the page URL. Use a slash for sub-folders: `about/our-team`
4. Keep **Status** as `Draft`
5. Click **Save** — the page is created and you are taken to the Page Builder
6. Add your content using **+ Add Block**, then click **Save**

2. Edit an existing page

1. Go to **Pages** → click the page title
2. Make your changes
3. Click **Save**

3. Publish a page (Draft → Live)

1. Go to **Pages** → open the page
2. Click the **Settings (gear)** icon
3. In the **Status** dropdown, change `Draft` to `Published`

4. Click **Update** / **Save**

✓ The page is now live and visible to visitors.

4. Set a page back to Draft (Live → Hidden)

1. Go to **Pages** → open the page
2. Click **Settings (gear)** → change **Status** from `Published` to `Draft`
3. Click **Update** / **Save**

✓ The page is removed from the website, but all of its content is preserved. You can make it live again at any time by switching the status back to `Published`.

5. Delete a page

1. Go to **Pages** → click the **trash icon** next to the page
2. Confirm the deletion

> **Warning:** A deleted page cannot be restored. If you only want to hide a page temporarily, use **Draft** instead of deleting it.

Quick reminders

- To publish a page, set **Status = Published** and click **Save**. That is the entire publish action.
- Publishing a page does **not** automatically add it to the navigation menu. To show it in the header or footer, add it under **Menus**.
- Every change takes effect only after you click **Save**.
