14. Navigation Menu (Navbar)

Adding, reordering and removing navbar items and dropdown sub-menus

> **Audit reference:** Item 9 — *Navigation (Process Note): "Navbar state before adding a new item from the admin panel."*

Where the navigation lives

Sidebar → **Menus**

This screen has two levels:

- **Menus list** — shows every menu (for example *Primary menu*, *Footer menu*) with its item count, plus **Add menu**.
- **Menu structure** — opens when you click a menu, and is where you add and arrange items.

1. Opening a menu

1. Go to **Menus**
2. Click the menu name you want to edit (for example **Primary menu**)
3. The **Menu structure** screen opens

2. Adding a menu item

1. In **Menu structure**, click **Add Menu** (the dashed button at the bottom)
2. A new item called **"New item"** is added
3. Click the **arrow (›)** on the left of the item to expand it
4. Fill in the details as per the table below
5. Click **Save menu**

Field	What to enter
Navigation Label	The text visitors will see (for example "About Us")
Type	`Page`, `Custom Link`, or `Modal`
Page	(If Type = Page) Choose the page from the dropdown — the URL fills in automatically

Field	What to enter
URL	(If Type = Custom Link) Type the full web address
PDF Link / Document	(If Type = Modal) Pick a PDF from the Media Library
Target	Open in the same tab, or open in a new tab

✓ The item now appears in the navigation bar.

3. Reordering items

- **Drag and drop** an item to move it up or down.
- Dragging an item **below** another item makes it a **sub-item** (dropdown) of that item.
- To move an item one level to the left (out of a dropdown), use the **left arrow** button on the item.
- To move an item one level to the right (into a dropdown), use the **right arrow** button.
- Click **Save menu** to apply the new order.

4. Removing an item

1. Expand the item
2. Click the **trash icon**
3. Click **Save menu**

To delete several items at once, tick the checkboxes on the left and click **Remove selected**.

5. Managing whole menus

On the **Menus list** screen you can also **Copy** a menu (to create a duplicate) and **Delete** an entire menu.

Quick reminders

- Publishing a page does **not** add it to the navigation bar. You must add it here under **Menus**.
- Choose **Type = Page** whenever the link points to a page on this website — the URL then stays correct even if the page slug changes later.
- Use **Type = Custom Link** for external websites (for example a WhatsApp link or another domain).

- Changes take effect only after clicking **Save menu**.
