Draft and Published

Every page sits in one of two states, set from the Status dropdown in the page settings:

Status	What it means
`Draft`	The page is stored in the system but is not shown on the website. Visitors get a not-found page if they type its address.
`Published`	The page is live and anybody can reach it. Saving the page while the status is set to Published is what puts it online.

Creating a new page

1. Go to **Pages** in the left menu, then **New Page**.
2. Type the **title** as it should appear on the site, for example *Annual Report 2025*.
3. Type the **slug**. This is the address of the page. For a page inside a folder, use a slash, for example `media/annual-report-2025`.
4. Leave the status as `Draft` for now.
5. Press **Save**. The page is created and you land in the page builder.
6. Build the page with **Add block**, then press **Save** again when you are done.

Editing a page that already exists

1. Go to **Pages** and click the title of the page.
2. Make the changes you need.
3. Press **Save**.

Publishing a page

1. Open the page from **Pages**.
2. Open the settings panel using the gear icon at the top of the screen.
3. Change **Status** from `Draft` to `Published`.
4. Press **Update**, or close the panel and press **Save**.

The page goes online the moment you save. There is nothing else to press.

Taking a page offline again

1. Open the page from **Pages**.
2. In the settings panel, change **Status** back to `Draft`.
3. Press **Update** or **Save**.

The page disappears from the website but nothing is lost. Put it back at any time by setting the status to `Published` again.

Deleting a page

1. From the **Pages** list, click the bin icon beside the page.
2. Confirm the deletion.

> A deleted page cannot be brought back from the admin panel. If you only want a page out of the way for a while, switch it to `Draft` instead of deleting it.

A few things to keep in mind

- Publishing a page does not put it in the navigation bar. That is done separately under **Menus**.
- Nothing shows on the website until **Save** is pressed.
- If a page is missing from the site, check the status first. A draft is saved but stays hidden.
- If the **Save** button is not showing, the account cannot edit pages. Please ask an administrator.
